WIRELESS

Setting up your Internet Connection

Step 1

Locate the Ethernet wall jack in your unit. Insert one end of an Ethernet cable directly into the Ethernet wall jack.

Step 2

Insert the other end of the Ethernet cable into your computer or other device. Launch a browser such as Google Chrome. You will now be connected to the Everywhere Wireless network.

Step 3

If Wi-Fi is desired, connect a wireless router to your Ethernet wall jack using an Ethernet cable. Follow the instructions that came with your wireless router or visit the Wi-Fi Store on our website to view our highly recommended routers. If purchasing in-store, we recommend buying a "dual-band" router that does NOT contain the words "cable" or "modem" on the packaging. Please note that you will always experience the fastest speeds when plugged directly into the Ethernet wall jack.

Step 4

Visit **EverywhereWireless.com** and enter your property address in the search bar to view your available speed upgrade packages and to shop for relevant products and services.
